PaintScaping Tell Me More

What is Spatial Augmented Reality?

This is the term for adding computer-generated effects to the existing real world.

What makes PaintScaping unique?

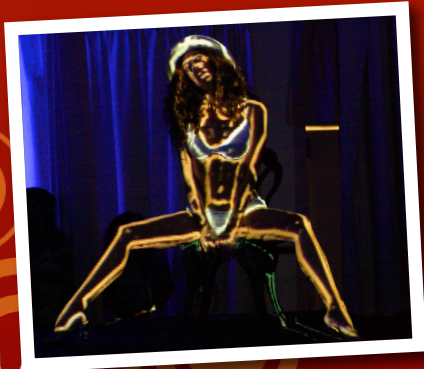

Using our patented system we take existing features of the environment – from windows, to tree trunks, to the human body – and add virtual effects to those features. It’s a revolutionary merging of the real and virtual worlds.

You won't believe your eyes.

- Children wave to virtual elves climbing a real building and, in moments, the elves transform it into a winter wonderland.
- A live model becomes a living painting.
- The exterior of an auditorium lights up like a Las Vegas casino.
- Bolts of electricity flash across a haunted house as transparent ghosts prowl.
- A private residence makes a statement with its rock ‘n roll lighting.

This is PaintScaping.

Our patented system creates effects that are so seamless, it’s impossible to tell where the real world ends and the virtual world begins. Call for a demo. You may just find yourself waving at virtual elves!
